

IEEE SAS 2017: Plug Fest

Workshop Program

John Schmalzel and Russell Trafford

Rowan University S.M.A.R.T. Lab

March 1, 2017

Executive Summary

This is a document describing this template.

Key Findings

After careful analysis, a number of conclusions have been reached:

1. **This template works okay.** But there are some minor hiccups and inelegant features.
2. **Your feedback will help it to improve** So please provide it.
3. **Once it works well, formatting will not be a concern if you use L^AT_EX.** This is the goal.

These findings are based on an econometric study that uses the fact that state governments have implemented building codes at varying times to isolate the impact of building codes from underlying time trends, state characteristics, shifts in climate and prices, and economic conditions. This strategy means that the findings described above cannot be attributed to nationwide trends or individual state characteristics that might otherwise lead to inaccurate conclusions.

1 Purpose

This section describes some custom CPI commands.

2 Big Picture

3 Details

3.1 Functional Requirements

3.1.1

3.1.2
